

STUDY OF LOGIC GATE USING DISCRETE COMPONENTS

Application areas : Schools & Science college (Physics , Electronics & Computer) , Polytechnic & Engineering laboratories, Research purpose , Universities.

Technical specifications:

1. 230 V AC , 50Hz operated table top model.
2. Experimental circuits are engraved on quality polycarbonate acrylic sheet to understand the circuits clearly.
3. High quality (3 amp) toggle switches are given to input the logic HIGH & LOW
4. OUT PUT indicator are given for every GATE testing.
5. Inbuilt fix power supply.
6. Kit is fitted in MS box with water-green powder coating finish.
7. Above trainer kits are manufactured using quality components.
8. Size: 190 x 230 x 90 mm (L X B X H) , 0.8 thickness.
9. Supplied with experimental details manual .

Experiments can be done using kit as,

1. To study the logic GATES using discrete components like resistors, diode & transistors.
